

2022 KEY FINDINGS

1

The overall count of people experiencing homelessness in San Antonio/Bexar County **increased by 2%** from 2020. However, compared to population growth, the percentage of the population experiencing homelessness has **remained flat at 0.14%**.

2

Chronic homelessness, or homelessness for 12 months or more with a disabling condition, **increased by 77%** from 2020. However, unsheltered chronic homelessness **increased by only 4.5%**, meaning the most vulnerable are often being moved into safer environments, but more permanent supportive housing development is needed for long-term solutions.

3

Out of **1,036 individuals** experiencing unsheltered homelessness, only **33 were veterans**. This is the lowest reported count of unsheltered veterans in San Antonio/Bexar County since we began closely monitoring this population for the Mayor's Challenge to Effectively End Veteran Homelessness in 2016.

4

At **22.5%** of the overall homeless population, Black/African American individuals are **overrepresented by over 3-times** proportional to the community population.

5

7% of surveyed individuals identified as LGBTQ+, of which nearly **26%** reported that their sexual orientation affected their current experience of homelessness.

6

62.5% of unsheltered individuals reported either going without any medical care or relying on emergency rooms.

7

Of those surveyed with experience in the foster care system, **44%** reported not having a stable place to live upon exit.

8

The overall count of individuals experiencing homelessness due to a domestic violence situation **decreased by 7%** from 2020.

9

The top three self-identified needs among those experiencing unsheltered homelessness were housing, ID recovery, and healthcare.
